Rapide Release Notes

Release 3.0.5

Contents

Important Notes	3
Fixes	3
Removed LOG4J	3

Important Notes

For this update you need to use GuardIEn 8.7.5 or later if you use GuardIEn to build Rapide applications. Do not copy the GDOPRAPG.dll to your GuardIEn folder unless you are using GuardIEn 8.7.5 or later.

Fixes

The following issues have been fixed.

Removed LOG4J

The LOG4J java library was previously included in the Rapide run time but detailed analysis shows that it was not used. To remove the need to continuously patch Rapide as new vulnerabilities are fixed in log4j, it has been removed.
