**Release 2.6.3**

## Fixes

---

### ***CR177 Call Stack Timing Data***

---

The elapsed time shown in the callstack can be unreliable. The method of gathering the elapsed time has been changed to a more reliable approach. This measures elapsed time to 1/1000 second resolution. Note that the Monitor Call Stack dialog now correctly shows the figure as elapsed *time* not *CPU* since both the previous and current data was always elapsed time not CPU.
